Enumerated

**ACAMPE** Lindl.

About 10 species are distributed from tropical to the Himalayan regions to Indochina, and SE Asia, tropical and subtropical Africa, Madagascar, and the islands of the West Indian Ocean. 6 species are in India, with 3 species in Assam and Karbi Anglong District.

Epiphyte; inflorescences several; flowers slightly fragrant; sepals and petals yellowish green with reddish brown transverse stripes and spots; lip white, spotted with purple-red.

Flowering: Nov. – Dec.

Habitat: Epiphyte on tree trunk in open forests.

Epiphyte; flowers 1 cm across, yellow, slightly fragrant; sepals and petals yellow with reddish brown transverse stripes; lip white, slightly spotted with purple-red.

Flowering: Nov. – Dec.

Habitat: Epiphyte on tree trunk.

Epiphyte; flowers yellow with purplish brown transverse stripes; lip white, with purplish brown longitudinal stripes above.

Flowering: June – July.

Habitat: Epiphyte on tree trunks or large branches.

**ACANTHEPHIPPIUM** Bl.

Eleven species distributed in S and NE India and Bangladesh, throughout SE Asia, to S Japan, New Guinea, and the SW Pacific islands; 3 species in India, 2 in Assam and Karbi Anglong District. 9 species in Karbi Anglong District.

Terrestrial; flowers creamy white with parallel red venation, tubular, 3.5 – 4.5 cm across.

Flowering: June – July.

Habitat: Growing in shaded & humid places in dense forests, banks of streams.

Terrestrial; Inflorescence 15 – 20 cm, fleshy; rachis densely 3 – 5-flowered; Flowers white or yellow with purplish brown spots, campanulate-tubular, 40 – 45 mm.

Flowering: April – July.

Habitat: Shaded and Damp places in dense forests.

**AERIDES** Lour.

About 20 species distributed in Sri Lanka, India, Nepal, Bhutan, Myanmar, China, Thailand, Indochina, and Malaysia to the Philippines and Indonesia; 10 species in India, 5 species in North East India and 3 species in Karbi Anglong District.

Epiphyte; flowers reddish or pinkish purple with darker spots, 2-2.5cm across.

Flowering: May – July.

Habitat: Epiphyte in lowland forest.

Epiphyte; flowers white with purple blotches at the extremeties, 2.2-2.5 cm across, fragrant.

Flowering: May-June.

Habitat: Epiphyte on tree trunk.

Epiphyte; flowers fragrant, purplish-pink suffused with white, dark pink spotted, opening widely, about 2 cm across.

Flowering: May.

Habitat: Epiphyte in mixed deciduous forest and humid evergreen forest.

**ANOECTOCHILUS** Bl.

About 40 species known from India and the E Himalayas, through S and SE Asia to Australia and the SW Pacific islands; 16 species in India, 3 species in Assam, 2 in Karbi Anglong District.

Terrestrial; flowers pinkish, lip white, about 2.5 cm long.

Flowering: April – June.

Habitat: Terrestrial in dense humid evergreen forest.

ARACHNIS Bl.
About 13 species distributed in the tropical Asia; 2 species in India, 1 in the Karbi Anglong District.

ASCOCENTRUM Schltr. ex J. J. Sm.
About 5 species distributed in the Himalayas to Indonesia and the Philippines; 7 species in India, 1 in Karbi Anglong District.

BIERMANNIA King & Pantl.
About 9 species distributed in China, India, Indonesia, Peninsular Malaysia, Thailand, Vietnam; 2 species in India; 1 in Karbi Anglong District.

BRACHYCORYTHIS Lindl.
About 33 species distributed in S and tropical Africa and Madagascar, with a few species extending to tropical and subtropical Asia; 1 species in Karbi Anglong District.

Brachycorythis helferi (Rchb.f.) Summerh., Kew Bull. 10: 235 (1955). (Fig. 3) Terrestrial; inflorescence 5-8 flowered; single flowers arising from leaf axil, purplish white. Flowering: June-July. Habitat: Forests, open places in grasslands.

BULBOPHYLLUM Thouars
About 1,900 species distributed in tropical areas of both Old and New Worlds; 100 species in India and Assam represents 24 species, 6 species in Karbi Anglong District.

Bulbophyllum capillipes Par. & Reich. f. in Trans. Linn. Soc. London 30: 150, t. 32 a. 1847; Hook. f., Fl. Brit. India 5: 755. 1890. (Fig. 4) Epiphytic; flowers yellow, with red tinged lines, about 1.5 cm across, solitary; lip violet-purple. Flowering: July-September. Habitat: Epiphyte on tree trunks in open evergreen forest.

Bulbophyllum car-eyananum (Hook. f.) Spreng., Syst. Veg. 3: 732. 1826; Hook. f., Fl. Brit. India 5: 760. 1890. Epiphyte; flowers purplish-brown, 0.5-0.8 cm long.
Flowering: October-December.
Habitat: Epiphyte on tree trunks in dense humid evergreen forest.

*Bulbophyllum crassipes* Hook. f., Fl. Brit. India 5: 760. 1890. (Fig. 5)
Epiphyte; raceme 2–7 cm, densely many flowered; Flowers yellowish brown.
Flowering: Nov. - Dec.
Habitat: Epiphyte on tree trunks in evergreen broad-leaved forests.

Epiphyte; flowers reddish-brown.
Flowering: June-July.
Habitat: Epiphyte in dense humid evergreen forest near a waterfall

Epiphyte; Inflorescence umbellate; flowers small, dirty brown or pale rosy, spotted with purple.
Flowering: April – July
Habitat: Epiphytic in evergreen forest.

**CALANTHE** R. Brown
About 150 species distributed in tropical and subtropical Asia, Australia, New Guinea, and the SW Pacific islands, as well as tropical Africa and Central and NW South America; 23 species in India, 9 in Assam, 2 species in Karbi Anglong District.

Terrestrial; flowers pale pinkish purple with purple lip sometimes flushed with orange.
Flowering: August – September.
Habitat: Terrestrial in damp places on riversides.

Terrestrial; flowers white, occasionally purplish red, later turning orange, turning black when dried.
Flowering: May.
Habitat: Terrestrial in evergreen broad-leaved forests.

**CLEISOCENTRON** Bruhl
1 species in India, Assam and Karbi Anglong District.

*CLEISOSTOMA* Bl.
About 100 species distributed in Sri Lanka, India, mainland SE Asia, Malaysia, and Indonesia to the Philippines, New Guinea, Pacific islands, and Australia; 19 species in India among them 3 species grow in Karbi Anglong District.

Epiphyte; flowers 1.5 cm across, sepals and petals buff with purple longitudinal lines.
Flowering: August-October.
Habitat: Epiphytic on tree trunks in evergreen forests.

Epiphyte; flowers about 1.3 cm across; sepals and petals yellowish green, with purplish brown stripes; lip white with purple-red midlobe, column yellow.
Flowering: April-June.
Habitat: Epiphytic on tree trunks in evergreen forests.

Epiphyte; flowers about 1 cm across, sepals and petals yellow with intra marginal brown bands, lip white at the base.
Flowering: May – June.
Habitat: Epiphyte on tree trunk in dense humid evergreen forest.

**COELOGYNE** Lindl.
About 200 species distributed in tropical and subtropical Asia to Oceania, 43 species in India, 15 in Assam and 2 in Karbi Anglong District.

Flowering: August-December.
Habitat: Epiphyte on tree trunk in dense humid evergreen forest.

Rhizome rigid; inflorescence hysteranthous, 10–15 cm, 4–6-flowered; flowers green or yellowish green, 10 mm in diameter.

Flowering: June-July.
Habitat: Epiphyte on tree trunk or rocks in forests.

CORYMBORKIS Thouars
1 species in India, Assam and Karbi Anglong District.

Terrestrial; flowers white, fragrant, not widely spreading, 3.2–3.8 cm long.

Flowering: March–May.
Habitat: Terrestrial at shade and in dense humid evergreen forest with undergrowth of tall herbs.

CREPIDIUM Bl.
About 280 species distributed in throughout the Asian tropics and subtropics, Australasia, and Indian Ocean islands, with a few species in temperate Asia; 10 species in India, 2 in Assam and Karbi Anglong District.

Terrestrial; Flowers purplish red, 1.5 cm across

Flowering: June–July.
Habitat: Terrestrial in dense humid evergreen forest on rocky terrain, also in the lowlands.

Crepidium calophyllum (Rchb.f.) Szlach., Fragm. Florist. Geobot., Suppl. 3: 125. 1995. Malaxis calophylla (Rchb.f.) Kuntze, Revis. Gen. Pl. 2: 673. 1891. (Fig. 6)

Plants terrestrial; many flowered; flowers pale yellowish green, lip with purplish red base.

Fig. 6. Crepidium calophyllum (Rchb.f.) Szlach. (1995).
Date taken: 22Jul-11.

Flowering time: July.
Habitat: Humus-rich soils in dense forests.
Distribution: NE India, Cambodia, India, Indonesia, Malaysia, Myanmar, Thailand, Vietnam.

CYMBIDIUM Sw.
About 55 species distributed in tropical and subtropical Asia, south to Papua New Guinea and Australia; 30 species in India, 12 in Assam and 4 species in Karbi Anglong District.

Epiphytic; flowers 4-5 cm across, slightly fragrant; sepals and petals pale yellow to cream-yellow, with a broad central maroon-brown stripe; lip cream-colored.

Flowering: April–May.
Habitat: Epiphyte on tree trunk in dense humid evergreen forest.

Epiphytic; flowers 3–4 cm across; sepals and petals yellow with a central purplish red longitudinal stripe; lip cream-yellow.

Flowering: May–June.
Habitat: Epiphyte on tree trunk in dense humid evergreen forest.

Flowers 4–5 cm across, greenish yellow, with longitudinal red-brown or purple lines in sepals and petals; lip yellowish green to pale yellow, with purple striations on lateral lobes and purple spots or patches on mid-lobe.

Flowering: October–January.
Habitat: Under Tropical forests, in a shady place.

Epiphytic; flowers 4–5 cm across; sepals and petals white, with a central maroon stripe; lip maroon, tinged white at its base.

Flowering: June–July.
Habitat: Epiphyte on tree trunk in dense humid evergreen forest.

CYRTOSIA Bl.
Five species distributed in tropical Asia to E Asia; three species in India, 2 in Assam and 1 in Karbi Anglong District.
**Cyrtosia javanica** Bl., Bijdr. 396. 1825. *Galeola javanica* (Bl.) Benth. & Hook. f., Gen. Pl. 3: 590. 1883. (Fig. 7)

Plants small, ca. 10 cm tall; flowers not fully opening, yellowish brown, fleshy.

*Flowering*: May – June.

*Habitat*: Terrestrial in humid evergreen forest and bamboo forests.

**DENDROBIUM** Sw.

About 1,100 species distributed in India across to Japan, south to Malaysia and Indonesia, east to Australia, New Guinea, and the Pacific islands; 102 species in India and nearly 20 species grow in Assam, 12 species grow in Karbi Anglong District.

**Dendrobium acinaciforme** Roxb., Fl. Ind. 3: 487. 1832; Chowdhery, Orch. Fl. Arunachal Prad. 283. 1998.

Epiphyte; flowers yellowish-white, about 1 cm long.

*Flowering*: June – August.

*Habitat*: Epiphyte on tree trunk in dense humid evergreen forest.

Epiphyte; flowers, pale rose, 4.5-5 cm across; lip yellow.

*Flowering*: April – May.

*Habitat*: Epiphyte in mixed deciduous forest or open forest.

**Dendrobium chrysanthum** Wall. ex Lindl., Edwards's Bot. Reg. 15: t. 1299. 1830.

Epiphyte, Flowers thickly textured, yellow, lip disk with a chestnut blotch on either side.

*Flowering*: October-November.

*Habitat*: Epiphytic on tree trunks in dense forests, lithophytic on wet rocks in valleys.

Epiphytic; flowers white with purple; lip white suffused with yellow.

*Flowering*: March – May.

---

**Habitat**: Epiphyte on tree trunk in forest along small streams.

Epiphytic; flowers 4-5 cm across, sepals and petals golden yellow; lip golden yellow, with or without maroon blotch.

*Flowering*: March – May.

*Habitat*: Epiphyte in mixed deciduous forest, also in humid evergreen forest.

**Dendrobium formosum** Roxb. ex Lindl. in Wall., Pl. Asiat. Rar. 1: 34, t. 39. 1830. Hook. f., Fl. Brit. India 5: 721. 1890. (Fig. 8)

Epiphytic; inflorescence 2-5 flowered; flowers white, 7-8 cm across; lip white with yellow blotches at middle.

*Flowering*: May – July.

*Habitat*: Epiphyte in tropical forest.

**Dendrobium fugax** Rchb.f., Gard. Chron. 1257. 1871.

Epiphyte; flowers white, 3-3.5 cm across, fugacious.

*Flowering*: March – October.

*Habitat*: Epiphyte in humid evergreen forest, mixed deciduous forest.

**Dendrobium jenkinsii** Wallich ex Lindl., Edwards’s Bot. Reg. 25: ad t. 37. 1839. (Fig. 9)

Epiphyte; Inflorescence lateral from pseudobulb, shorter than or nearly as long as stem, 1-3-flowered; flowers ca. 4 cm, uniformly yellow-orange.

*Flowering*: April – May.

*Habitat*: Epiphytic on tree trunks in open forests.

Epiphytic; flowers 4-5 cm. across, pale purple inner surface of lip with a deep purple spot surrounded by a white circle.

*Flowering*: April – May.

*Habitat*: Epiphytic on tree trunks in open forests.

Epiphytic; flower orange yellow, 5-7 cm across, deep yellow disk with a pale purplish brown blotch on either side.

*Flowering*: April – June.

*Habitat*: Epiphytic on tree trunks in open forests.

Flowers 5-7 cm. across, white merging with purple at apex, wavy in texture, lip purple at tip, at middle followed by deep purple central blotch, both surfaces densely pubescent.

*Flowering*: April – May.

*Habitat*: Epiphyte in humid evergreen forest, also in the lowlands.

Epiphytic; flowers 4-5 cm across; sepals and petals white tinged with purple at tips, lip white with large purple patch on the disc.

*Flowering*: April – May.

*Habitat*: Epiphytic on tree trunks at forest.

**Dienia** Lindl.

About 19 species distributed in throughout the Asian tropics and subtropics and in Australia; 3 species in India 1 in Assam and Karbi Anglong District.

*Malaxis latifolia* J.E. Smith in Rees, Cyclop. 22, no. 3. 1819.

Terrestrial; flowers pale purple, 1 cm across.

*Flowering*: May – June.

*Habitat*: Terrestrial in open humid evergreen forest.

**Eria** Lindl.

*Eria* (s.l.) comprises ca. 370 species widespread in tropical Asia and the whole of the Malay Archipelago, east to New Guinea and Bougainville Island; around 10 species in Assam, the Karbi Anglong District has 2 species.

*Flowering*: September- November.

*Habitat*: Epiphyte in humid evergreen forest, mixed deciduous forest.

*Flowering*: September- November.

*Habitat*: Epiphyte in humid evergreen forest, mixed deciduous forest.

*Flowering*: September- November.

*Habitat*: Epiphyte in humid evergreen forest, mixed deciduous forest.

*Flowering*: September- November.

*Habitat*: Epiphyte in humid evergreen forest, mixed deciduous forest.

*Flowering*: September- November.

*Habitat*: Epiphyte in humid evergreen forest, mixed deciduous forest.

*Flowering*: September- November.

*Habitat*: Epiphyte in humid evergreen forest, mixed deciduous forest.

*Flowering*: September- November.

*Habitat*: Epiphyte in humid evergreen forest, mixed deciduous forest.

*Flowering*: September- November.

*Habitat*: Epiphyte in humid evergreen forest, mixed deciduous forest.

*Flowering*: September- November.

*Habitat*: Epiphyte in humid evergreen forest, mixed deciduous forest.
nodding, dull purple-red to brownish yellow.  
Flowering: May- July.  
Habitat: Sparse forests, bamboo forests, grassy slopes.

GASTROCHILUS D. Don.  
About 47 species distributed in from India and Sri Lanka to E Asia and south to Indonesia; about 12 species in India, 3 in Assam and 2 in Karbi Anglong District.

Epiphyte; flowers yellow with brownish-purple spots, 1.5-2 cm across.  
Flowering: October – November.  
Habitat: Epiphyte in humid evergreen forest, mixed deciduous forest.

Epiphyte; flowers white or yellowish-green, 0.5cm across.  
Flowering: June- July.  
Habitat: Epiphyte in humid evergreen forest, mixed deciduous forest.

GEODORUM Jacks.  
About ten species distributed in from tropical Asia, as far north as S Japan (Ryukyu Islands), to Australia and the SW Pacific islands; 1 species in India, Assam and Karbi Anglong District.

Terrestrial; flowers white to pinkish, lip with a central yellow callus and crimson-purple venation and streaks.  
Flowering: June – July.  
Habitat: Terrestrial in evergreen forest, also in grass land.

GOODYERA R. Brown  
About 100 species distributed in S Africa, Asia, NE Australia, Europe, Madagascar, North America including Mexico, SW Pacific islands; 17 species in India, 4 in Assam, 2 species in Karbi Anglong District.

Terrestrial; flowers fragrant, opening weakly, white tinged pale green.  
Flowering: April – June.  
Habitat: Terrestrial at the bank of a small stream and in evergreen forest, also on rock in a stream.

Goodyera viridiflora (Bl.) Bl., Coll. Orchid.: 41. 1858.  
Flowers opening widely, pale green tinged pale reddish brown, large; pedicel and ovary pale reddish brown, cylindric-fusiform, 14–15 mm, pubescent toward apex.  
Flowering: August- Sept.  
Habitat: Forests, damp places along streams, in thin leaf litter on rocks.

HABENARIA Willd.  
About 600 species distributed in worldwide, mainly in tropical and subtropical areas; about 66 species in India; 7 in Assam; 2 in Karbi Anglong District.

Habenaria acuifera Wallich ex Lindl., Gen. Sp. Orchid. Pl. 325. 1835. (Fig. 11)  
Plants terrestrial, 14–38 cm tall; raceme 8–20-flowered, 3–8 cm; flowers yellow, small  
Flowering time: Jun–August.  
Habitat: Forest, thickets, grasslands.

Plants to 50 cm tall; raceme densely many flowered, 9.5–13 cm; flowers greenish, small, glabrous, small.  
Flowering time: Jun–Sept.  
Habitat: Forests, thickets, grasslands.

HETAERIA Bl.  
About 30 species distributed in tropical Africa and Asia, extending to New Guinea, NE Australia, and the Pacific islands; 6 species in India, 2 in Assam and 1 in Karbi Anglong District.

Hetaeria affinis (Griff.) Seidenf. & Ormerod, Oasis, Suppl. 2: 9, 2001; Mishra, Orch. India, 304, 2007. (Fig. 12)  
Terrestrial; flowers opening slightly, 5-6 mm across, green, tipped with pink; lip white.
Flowering: April-May.
Habitat: Terrestrial in secondary evergreen forest close to a small stream.

**LIPARIS** Richard
About 320 species distributed in well represented in tropical Asia, New Guinea, Australia, SW Pacific islands, and the subtropical and tropical Americas, with a single species in Europe and two in North America; 45 species in India, 9 in Assam and 3 in Karbi Anglong District.

Epiphytic; flowers greenish white or pale greenish yellow.
Flowering time: Jun–July.
Habitat: Epiphyte in humid evergreen forest, growing on exposed trees.

Plants terrestrial; rachis several flowered; flowers yellowish purple, small.
Flowering time: Jun–July.
Habitat: Forests, shaded places in grasslands or soil-covered rocks.

**Liparis wightiana** Thwaites Enum. Pl. Zeyl. 295. 1861. (Fig. 14)
Plants terrestrial; rachis 10–20 flowered; flowers greenish yellow, small.
Flowering time: June–July.
Habitat: Forests, shaded places in grasslands or soil-covered rocks.

**LUISIA** Gaudichaud
About 40 species distributed in Bhutan, China, India, Indochina, Indonesia, Japan, Malaysia, New Guinea, Pacific islands, Philippines, Sri Lanka, and Thailand; 16 species in India, 5 in Assam and 2 in Karbi Anglong District.

Epiphytic; flowers purplish green with faint purple lines, about 1.5 cm across.
Flowering: March–May.
Habitat: Epiphyte in humid evergreen forest, growing on exposed trees.

Epiphytic; flowers greenish yellow, with purple base.
Flowering: April–May.
Habitat: Epiphyte in humid evergreen forest, growing on exposed trees.

**MICROPERA** Lindl.
About 15 species distributed in ranging from the Himalayas to SE Asia, New Guinea, Australia, and the Solomon Islands; 3 species in India, 3 in Assam and 3 in Karbi Anglong District.

Epiphyte; flowers pale-pink, 0.6–0.7 cm across.
Flowering: June–July.
Habitat: Epiphyte on tree trunk in evergreen tropical forest.

**Micropera pallida** (Roxb.) Lindl., Edwards's Bot. Reg. 18: t. 1522. 1832. (Fig. 15)
Epiphyte with a stout robust stem; inflorescence paniculate, many flowered; flowers yellowish, 1.2 cm across.
Flowering: April–May.
Habitat: Epiphyte on tree trunk in evergreen tropical forest.

Epiphyte; Flowers pale-purple, 1.5-2 cm across.
Flowering: April – May.
Habitat: Epiphyte on tree trunk in evergreen tropical forest.

NERVILIA Commers. ex Gaud.
About 65 species distributed in tropical and subtropical Africa, Madagascar, and parts of the Arabian Peninsula, across India, Nepal, and Bhutan to Japan, SE Asia, New Guinea, N Australia, and the SW Pacific islands; 14 species in India, 3 in Assam, 1 in Karbi Anglong District.

Terrestrial; sepals brownish yellow or purple with purplish red venation, petals brownish yellow or purple with purplish red venation, lip brownish tinged yellow at center and with purplish brown venation.
Flowering time: May–Jun.
Habitat: Forests, shaded and damp places.

OBERONIA Lindl.
About 200 species distributed in centered in tropical S and SE Asia but extending to tropical Africa, Madagascar, the Mascarene Islands, the Philippines, New Guinea, NE Australia, and the SW Pacific islands across to Tahiti; 50 species in India, 13 in Assam, 2 in Karbi Anglong District.

Oberonia falconeri Hook. f., Hooker’s Icon. Pl. 18: ad t. 1780. 1888.
Stem short; rachis 6.5–13 cm, many flowered; Flowers white, green or to greenish yellow.
Flowering: August – October.
Habitat: Epiphytic on tree trunks in forests.

Epiphytic; flowers yellowish.
Flowering: September – October.
Habitat: Epiphyte on tree trunk in evergreen tropical forest.

PAPILIONANTHE Schltr.
About 12 species distributed in China, India, SE Asia and the Malay Archipelago; 4 species in India, 2 in Assam, 1 in Karbi Anglong District.

Epiphyte; flowers 5–10 cm across; sepals and petals white, tinged with pink or purplish; lip deep purple-red.
Flowering: April – May.

Habitat: Epiphyte in mixed deciduous forest, also on solitary roadside trees.

PECTEILIS Raf.
About five species distributed in E and SE Asia, Himalayas; 4 species in India, 2 in Assam and 1 in Karbi Anglong District.
Pecteilis susannae (Lin.) Raf., Fl. Tellur. 2: 38. 1837. Orchis susannae Lin., Sp. Pl. 2: 939. 1753. (Fig. 16)
Plants robust, 45–120 cm tall; tubers ovoid-cylindrical, laxly 2–5-flowered; flowers fragrant, white, large.
Flowering time: July–Sept.
Habitat: Forests, grassy slopes, damp places in valleys.

PERISTYLUS Bl.
About 70 species distributed in SE Asia to New Guinea, NE Australia, and the SW Pacific islands; 27 species in India, 4 in Assam and 1 in Karbi Anglong District.

Plants robust; inflorescence 21–42 cm, densely many flowered; flowers pure white.
Flowering: June–August.
Habitat: Terrestrial, scrubby slopes in forests.

PHAIUS Lour.
About 40 species: tropical Africa, Madagascar, tropical and subtropical Asia to Oceania; 7 species in India, 4 in Assam, 1 in Karbi Anglong District.

Flowers not widely opening, 5–6 cm in diam.; pedicel and ovary 2–3 cm, glabrous; sepal and petals pale pink to dark red or purple-brown.
Flowering: November-January.
Habitat: Terrestrial on the bank of a small stream in dense humid evergreen forest.

Terrestrial; flowers 7–12 cm across; sepals and petals whitish outside, reddish brown or brown inside; lip white toward base, pink or red-pink toward entrance with white stripes on inside.

*Flowering*: Nov. - January.

*Habitat*: Terrestrial, shaded and damp places in forests.

**PHALAENOPSIS** Bl.

About 45 species: from India to S China, Thailand, Indochina, Malaysia, and Indonesia to the Philippines and New Guinea, the majority in Indonesia and the Philippines; 7 species in India, 5 in Assam, 4 in Karbi Anglong District.

Epiphytic; flowers greenish yellow; lip purple spotted.

*Flowering*: May – July.

*Habitat*: Epiphyte in gallery forest along a large river, in a shady spot in humid evergreen forest.

Epiphytic; flowers fully open, almost 1.5 cm across, sepals and petals creamy-white, mid-lobe of lip with two chestnut-rusty vertical bands, column white.

*Flowering*: April- May.

*Habitat*: Epiphyte in forest along a river, in a shady spot in humid evergreen forest.

Epiphytic; flowers 3-4 cm across; sepals and petals yellow with dark brown spots and bars; lip mid-lobe white; column yellow.

*Flowering*: March – May.

*Habitat*: Epiphytic on tree trunks in evergreen forests.

---
